**BCP6-10MTR**

**Commercial, Irrigation  
and Agricultural Water**

## CentriPro

6" Single Phase Motors

6-10" Three Phase Motors

*NOTE: See color brochure (BRCP6SM) for  
more information and cutaway views.*

### FEATURES

#### SINGLE PHASE:

- Single Phase, 6" motors available in 5 – 15 HP, 230 volt models.
- Require CentriPro Control Boxes as shown on Order Number chart.

#### THREE PHASE:

- Three Phase, 6", 5 – 30 HP, 230 and 460 volt models have an exclusive voltage change plug feature. Stock one model and a different voltage plug to reduce inventory cost.
- Change Plug Order Numbers are:
  - PLUG-230V
  - PLUG-460V
- 6 – 10" Three Phase available from 5 – 200 HP in 200, 230, 460 and 575 volt models.

**CentriPro®**

CentriPro is a brand of ITT Corporation.

\* Furnas Class 14 Starters with ESP100 Overloads have several available coil voltages available.

\* Available Coil Voltages and their 4th character code are:

A = 120/240 D = 200/208 G = 240 ex. CSBA has a 120/240V Coil  
C = 240/480 E = 575 H = 480

5-30 HP, 3 Phase 230 and 460 Motors have adjustable voltage feature, change voltage plugs to convert from 230V to 460V operation. Spare Change Plug Order No's are: PLUG-230V or PLUG-460V

**NOTE:** The selection of Furnas "K" type ambient compensated heaters (overloads) is determined based on the Class of starter being used.

Class 16 DP starters use Furnas overload heater relay Tables 393, 395 and 398. Obsolete Class 15 and Innova starters use different tables and therefore different heaters.

## GENERAL FEATURES OF CANNED AND REWINDABLE WATER-TIGHT MOTORS

### 6" CANNED DESIGN MOTOR FEATURES

- **Replaceable Plug-in Motor Lead** – All 6" motor leads are stranded copper for flexibility and strength. Leads are 150" long and field replaceable.
- **Insulation** – The canned motor's stator coil is mounted in a stainless steel frame and is completely sealed in a stainless steel cylinder. The coil wire features moisture resistant insulation which is completely water-proofed for long life.
- **Heat Resistant** – The space between the stator's stainless steel protective can and its frame is filled with a specially formulated patented resin that protects the motor against thermal fluctuation and internal stress.
- **95° F (35° C) Water Temperature (CANNED TYPE: 6", 5 – 50 HP)** – The motors operate with a minimum flow rate of 0.5 ft./sec. (0.15 m/sec) in water temperature up to 95° F (35° C) without any derating of horsepower. This 95° F (35° C) temperature is 18° F (10° C) higher than NEMA standards.

### 8-10" REWINDABLE WATER-TIGHT MOTOR FEATURES

- **Insulation Wire** – The coil conductor insulation material is a specially developed denatured polypropylene, which offers excellent leak-resistant characteristics. Three barriers are applied to the copper conductors to provide complete insulation against the motor's cooling fluid. This design is the result of extensive research and is of superior quality. It insures that CentriPro motors will have an extremely long service life.

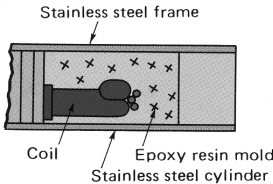

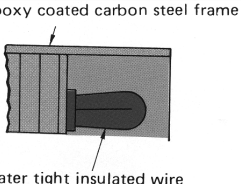

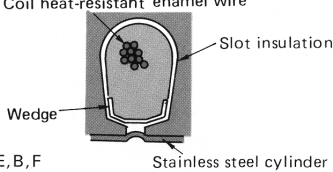

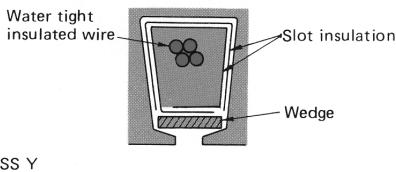

### MOTOR FEATURES - BOTH DESIGNS

- **Sand Resistant Slinger and Lip Seals** – CentriPro submersible motors feature double-row, grease packed, lip seals to prevent sand from entering the motor. A carbon steel slinger with a baked on epoxy coating prevents sand from entering the lip seal area. Additional protection against sand intrusion is provided

by the close tolerance slinger guide with a .02" fit. This design is field-proven in West Texas wells which are considered to be some of the worst sandy well applications. Best of all, these features are standard for a CentriPro motor, so there is no need to stock one motor for clean wells and another more expensive motor for the more abrasive, sandy jobs.

- **High Torque Characteristics** – The stator laminations are constructed of high quality, electrical grade, silicon steel which provide high torque even when the motor is subjected to nominal voltage variations.
- **Balancing** – The rotor balance rings (one on each end of the rotor) allow for excellent dynamic balance for the rotating element of the motor.
- **Carbon Sleeve Bearings** – Two carbon, water-lubricated, guide bearings are used to properly align the shaft. The bearings have a large surface area to better support the shaft, reducing whipping, while acting as a steady bushing.
- **Water-Filled Design** – The internal cooling water is mixed with antifreeze and antirust liquid to allow the motor to be stored at –22° F (–30° C). Two water plugs are provided for filling or draining the anti-freeze fluid during maintenance. These plugs are also used to top off and to check the water level.
- **Complete Corrosion and Water-Tight Protection** – All main motor components are made of stainless steel: including the can housing (water tight type motors have baked epoxy coated carbon steel housings), shaft and bolts. All other motor parts are finished with the baked epoxy coating.
- **Baked Epoxy Coating** – All external and internal cast iron parts are coated with a baked epoxy resin that provides excellent resistance to water and corrosion.
- **Quality Control** – All CentriPro submersible motors are manufactured and tested under the most stringent quality control procedures, providing long service life and trouble-free operation.

## SPECIAL TECHNOLOGY

### HIGH PERFORMANCE THRUST BEARING

#### APPLICATION

Motor Size	Output		Bearing Type	Number of Shoes
	HP	kW		
6"	5 – 30	3.7 – 22	A	3
6"	40 – 50	30 – 45	B	6
8 – 10"	40 – 150	30 – 110	C	6
10"	200	150	C	8

Number	Part Name
1	Pivot Shoe
2	Bearing Frame
3	Carbon Disc
4	Metal Support
5	Metal Frame
6	Thrust Plate
7	Slide Plate
8	Up Thrust Bearing

The field proven KINGSBURY design thrust bearing creates a wedge of water between the pivot shoe and carbon disc. Our innovative design permits high thrust loads to be placed on the bearings while showing no measurable wear after several years of severe duty operation. This allows for long pumping life, virtual trouble free operation and low maintenance. For all 6" motors, the 300 lbs. maximum continuous up thrust is absorbed between the upper carbon sleeve bearing and the rotor balance ring. For all 8" – 10" motors, the 1000 lbs. maximum continuous up thrust is carried between the upper slide plate and the separate up thrust carbon bearing.

Motor Size	2P			
	Down Thrust		Up Thrust	
	lbs.	kg	lbs.	kg
6" 5-30 HP	3,500	1,590	300 *(450)	136 *(200)
6" 40-50 HP	5,000	2,270	300 *(450)	136 *(200)
8"	10,000 ** (5,000)	4,540 ** (2,270)	1,000 ** (1,500)	450 ** (680)
10"	10,000	4,540	1,000	450

#### Note:

1. Thrust ratings showed are continuous except for values marked \*.
2. \* Momentary rating (3 minutes maximum).
3. \*\* 8" motor - 6" Flange when using standard stainless steel bolts (B&M), has a thrust value of 5,000 lbs. A thrust value of 10,000 lbs. can be obtained by using high tensile stainless steel bolts (ASTM F593G).
